

# Repairs

A bespoke repair service  
provided by our expert engineers

There is no better time to carry out vital repair and maintenance work than when a service reservoir is already out of service. During the cleaning and disinfection process our engineers and experts are uniquely placed to provide a bespoke repair service.

- Simultaneous cleaning and repairs significantly reduces both cost and downtime
- All of our service crews are fully trained to work safely within confined spaces
- Repairs are only carried out using materials that are fully approved by the Drinking Water Inspectorate and the UK's other regulators
- Internal repairs include: expansion joints, water proofing (DWI approved material application), protective coatings (1m<sup>2</sup> to 5000m<sup>2</sup>), valve servicing, replacement & pipe work modifications, metal work
- External repairs include: Water proofing, access hatches and ventilation, drainage, hand railings and access ladders, ground works and excavations

There is no one better placed to ensure services reservoirs are repaired to the highest standard, maintaining your assets in excellent working order.
